

## **CSCI 4341**

### **Assignment 1 (100 points)**

This assignment requires a group and will be due one week after the class it is assigned. The students, as a whole, will be responsible for the course notes. Each class a group of students will work together to take notes. They will then write the notes up, including additional resources, citations, images, examples, and text so it is useful for everyone to study from. The format is 12pt font, single-spaced, and should be submitted as a pdf and the source file. Latex, Word, Pages, etc. is fine as long as it follows the guidelines. There is no minimum or maximum length, but it must cover and discuss all topics from that class in depth enough to be used as reference. This should require at least a few pages.

Only one document is turned in for all people, since they should work together to make the notes. They will be posted on the website so everyone can use them. If we discuss homework problems or take a quiz in class, those may be included in the notes as well with the solutions we discussed.

The notes should reflect that you understood the lecture, and read the book(s) to better understand the problems and definitions. You may use images, etc. from the book or that you find online to better explain the topics, but remember to cite the sources and that you are graded based on thoroughness and the amount of work the two of you did. Also, remember that these notes are for everyone's benefit, so if something was confusing, you should address it in the notes.

Note: each group will take notes twice.
